Ecological Dynamics on Yellowstone’s Northern Range discusses the complex management challenges in Yellowstone National Park. Controversy over the National Park Service’s approach of “natural regulation” has heightened in recent years because of changes in vegetation and other ecosystem components in Yellowstone’s northern range. Natural regulation minimizes human impacts, including management intervention by the National Park Service, on the park ecosystem. Many have attributed these changes to increased size of elk and other ungulate herds. This report examines the evidence that increased ungulate populations are responsible for the changes in vegetation and that the changes represent a major and serious change in the Yellowstone ecosystem. According to the authors, any human intervention to protect species such as the aspen and those that depend on them should be prudently localized rather than ecosystem-wide. An ecosystem-wide approach, such as reducing ungulate populations, could be more disruptive. The report concludes that although dramatic ecological change does not appear to be imminent, approaches to dealing with potential human–caused changes in the ecosystem, including those related to climate change, should be considered now. The need for research and public education is also compelling.

\* Unique woodcut illustrations decorate both volumes \* Trail map to follow story locations in each volume \* For both hikers and armchair adventurers of the PCT Exploring the people, places, and history of the Pacific Crest Trail as it ranges 2,600 miles from Mexico to Canada, THE PACIFIC CREST TRAILSIDE READER EBOOK brings together short excerpts from classic works of regional writing with boot-tested stories from the trail. The heart of this anthology is these real trail tales, stories taken from PCT hikers: trailside humor and traditions, “trail angels” and “trail magic,” encounters with wildlife and wild weather, stories of being lost and found, rescues, and unusual incidents. Revealing a larger context are historical accounts of events such as Moses Schallenberg’s winter on Donner Pass and pioneer efforts like the old Naches Road that ended up creating access to today’s trails; Native American myths and legends such as that of Lost Lake near Mount Hood; and selections from highly-regarded environmental writers who have captured the region in print, including Mary Austin in The Land of Little Rain ; John Muir in The Mountains of California; and Barry Lopez in Crossing Open Ground. Readers will also enjoy a few more surprising contributions from the likes of Mark Twain and Ursula Le Guin. For this digital edition of the PCT READER, we combined our two print volumes into a single, robust ebook that features stories from both the CALIFORNIA and OREGON & WASHINGTON volumes. Because the two-volume set is a compilation of old and new essays, however, the editors were not able to obtain digital publication rights for some of the previously published material. So while this combination ebook includes all the newly commissioned stories, as well as many other pieces for which the editors did have digital access, there are approximately four contributions from each of the printed books that do not appear here.

Rapid environmental change calls for individuals and societies with an ability to transform our interactions with each other and the ecosystems upon which we depend. Adaptive capacity - the ability of a social-ecological system (or the components of that system) to be robust to disturbances and capable of responding to changes - is increasingly recognized as a critical attribute of multi-level environmental governance. This unique volume offers the first interdisciplinary and integrative perspective on an emerging area of applied scholarship, with contributions from internationally recognized researchers and practitioners. It demonstrates how adaptive capacity makes environmental governance possible in complex social-ecological systems. Cutting-edge theoretical developments are explored and empirical case studies offered from a wide range of geographic settings and natural resource contexts, such as water, climate, fisheries and forestry.  Of interest to researchers, policymakers and resource managers seeking to navigate and understand social-ecological change in diverse geographic settings and resource contexts

A template for pranksters, artists, adventurers and anyone interested in rampant creativity, for years to come. Tales Of The San Francisco Cacophony Society tells the history of the most influential underground cabal that you have never heard of. Rising from the ashes of the mysterious and legendary Suicide Club, The Cacophony Society, at its zenith, hosted chapters in over a dozen major cities, and influenced much of what was once called the underground. Flash Mobs, Urban Exploration, and Culture Jamming are a few of the pop culture trends that Cacophony helped kick off. Chuck Palahniuk’s Fight Club, Burning Man and Internet social networking powerhouse Laughing Squid were informed and inspired by Cacophony. The Burning Man Festival actually began as a Cacophony event as did the annual, and now world-wide SantaCon. Cacophony events could range from something as simple as climbing the Golden Gate Bridge or having a discussion over drinks about a movie seen together, to something as elaborate as The Atomic Café - an event involving a hundred bedraggled “nuclear holocaust Survivors” mounting elaborate costumed rituals throughout the bowels of a massive abandoned tooth paste factory. Yes... Cacophony was that strange. Cacophony’s heyday was concurrent with the rise of the internet. The story of this group is of historical significance for this reason. Information about upcoming pranks, street theater and other events hosted by Cacophony was spread by paper flyers posted on telephone poles and left in coffee shops, by the Societies mailer “Rough Draft” and by word of mouth. Then, with the genesis of personal computing and social networking, the jokers, artists and troublemakers of Cacophony were among some of the first non-geeks to explore the power of this new and world changing way of communicating. Burning Man, Urban Exploration, flash mobs and the like were avenues of creativity with their roots in Cacophony, that spread like wildfire through the mechanism of these new communication technologies.
