It is the wedding the world thought would never happen - two of Greece's oldest feuding families to finally

unite. But the marriage is not as it seems. Alesia has been bought by Sebastian. Now all he wants is a child to bind the feuding families. Little does he know that is something Alesia would never give him.

Structures placed on hillsides often present a number of challenges and a limited number of economical choices for site design. An option sometimes employed is to use the building frame as a retaining element, comprising a Rigidly Framed Earth Retaining Structure (RFERS). The relationship

between temperature and earth pressure acting on RFERS, is explored in this monograph through a 4.5 year monitoring program of a heavily instrumented in service structure. The data indicated that the coefficient of earth pressure behind the monitored RFERS had a strong linear correlation with temperature. The study also revealed that thermal cycles, rather than lateral earth pressure, were the cause of failure in many structural elements. The book demonstrates that depending on the relative stiffness of the retained soil mass and that of the

structural frame, the
developed lateral earth
pressure, during thermal
expansion, can reach
magnitudes several times
larger than those determined
using classical earth
pressure theories.

Additionally, a nearly
perpetual lateral
displacement away from the
retained soil mass may occur
at the free end of the RFERS
leading to unacceptable
serviceability problems.
These results suggest that
reinforced concrete
structures designed for the
flexural stresses imposed by
the backfill soil will be
inadequately reinforced to
resist stresses produced

during the expansion cycles. Parametric studies of single and multi-story RFERS with varying geometries and properties are also presented to investigate the effects of structural stiffness on the displacement of RFERS and the lateral earth pressure developed in the soil mass. These studies can aid the reader in selecting appropriate values of lateral earth pressure for the design of RFERS. Finally, simplified closed form equations that can be used to predict the lateral drift of RFERS are presented. KEY WORDS: Earth Pressure; Soil-Structure
