Adolescent Development and Rapid Social Change

Family is the most important influence and social group for children, but relationships shift in adolescence as teens and tweens struggle toward independence and try to establish their identity as individuals, according to the American Pediatric Association. This shift away from family and toward peers is normal.

Early adolescence: applying All Our Health - GOV.UK

The teenage years bring many changes. These are not only physical, but also mental and social changes. During these years, teens become more able to think abstractly. Over time they can make plans and set long-term goals. Each child may progress at a different rate and may have a different view of the world.

Change And The Law: The Adolescent Development: Issues and ...

Adolescence is the transitional stage of human development in which a juvenile matures into an adult. This transition involves biological (i.e. pubertal), social, and psychological changes, though the biological ones are the easiest to measure objectively.

Adolescence | Psychology Wiki | Fandom

Social changes are particularly notable as adolescents become more autonomous from their parents, spend more time with peers, and begin exploring romantic relationships and sexuality. Adjustment during adolescence is reflected in identity formation, which often involves a
