The major objective of this book was to identify issues related to the introduction of new materials and the effects that advanced materials will have on the durability and technical risk of future civil aircraft throughout their service life. The committee investigated the new materials and structural concepts that are likely to be incorporated into next generation commercial aircraft and the factors influencing application decisions. Based on these predictions, the committee attempted to identify the design, characterization, monitoring, and maintenance issues that are critical for the introduction of advanced materials and structural concepts into future aircraft.

This is an illustrated technical guide to the Boeing 737 aircraft. Containing extensive explanatory notes, facts, tips and points of interest on all aspects of this hugely successful airliner and showing its technical evolution from its early design in the 1960s through to the latest advances in the MAX. The book provides detailed descriptions of systems, internal and external components, their locations and functions, together with pilots notes and technical specifications. It is illustrated with over 500 photographs, diagrams and schematics. Chris Brady has written this book after many years developing the highly successful and informative Boeing 737 Technical Site, known throughout the world by pilots, trainers and engineers as the most authoritative open source of information freely available about the 737.

This is a practical approach to, and comprehensive examination of, the problems that face the aviation supervisor. The first chapter discusses the impact of population and geographic changes on the regulation of the airline industry. Chapter 2 deals with "The Federal Aviation Administration," Chapter 3 with "Regulatory Requirements," and Chapter 4 with "Organizational Structures." Chapter 5, "Management Responsibilities," explores such practical aspects as directing programs, leadership, providing motivation and incentives, and communication. Chapter 6, "Aviation Maintenance Procedures" Chapter 7, "Applications of Aviation Maintenance Concepts" and Chapter 8, "Budgeting, Cost Controls, and Cost Reduction" also explore the daily problems of aviation supervision in practical terms. Chapter 9, "Training and Professional Development in Aviation Maintenance," contains a discussion of certified aviation maintenance technical schools. Chapter 10 is an in-depth assessment of "Safety and Maintenance." Discussed here are safety in the maintenance hangar and on the ramp, fueling aircraft, electrical safety, radiation concerns, and building requirements. Chapter 11, "Electronic Data Processing," covers the computer and applications of received data. Chapter 12, "Aviation Maintenance Management Problem Areas," deals with matters ranging from parts ordering to administrative concerns. The final chapter is a "Forecast and Summary."
