This handbook summarizes staff practices in burn care and is intended to be a practice guide for the care of burn patients. It contains chapters on resuscitation and transport, wound care, operative techniques, critical care issues, and care of special burns, among others. This book should be used primarily by newcomers to the field of burn care as a basis for their experience with these often challenging patients.

Acute Care Surgery is a comprehensive textbook covering the related fields of trauma, critical care, and emergency general surgery. The full spectrum of Acute Care Surgery is expertly addressed, with each chapter highlighting cutting-edge advances in the field and underscoring state-of-the-art management paradigms. In an effort to create the most definitive reference on Acute Care Surgery, an evidence-based approach is emphasized for all content included. Also, notable controversies are discussed in detail often accompanied by data-driven resolutions.

The Yearbook compiles the most recent developments in experimental and clinical research and practice in one comprehensive reference book. The chapters are written by well recognized experts in the field of intensive care and emergency medicine. It is addressed to everyone involved in internal medicine, anesthesia, surgery, pediatrics, intensive care and emergency medicine.

A classic text since it was first published in 1974, the Lippincott Manual for Nursing Practice (LMNP) has provided essential nursing knowledge and up-to-date information on patient care for nearly 40 years. Now in its 10th edition, this full-color text continues to serve as the most comprehensive reference for practicing nurses and nursing students worldwide. Often referred as the 'Lippincott Manual' or simply the 'Lippincott', the LMNP is widely used as a procedure manual for many healthcare institutions (contains 157 Nursing Procedure Guidelines). It is also widely regarded as the Gold Standard for nursing practice in the classroom. Organized into five major parts, LMNP presents a comprehensive reference for all types of core nursing care. Part 1: Nursing Process & Practice; Part 2: Medical-Surgical Nursing; Part 3: Maternity & Neonatal Nursing; Part 4: Pediatric Nursing; Part 5: Psychiatric Nursing. Content is evidence-based with supporting articles highlighted in actual entries and procedure guidelines. Official Guidelines that shape practice are incorporated in to the content and include those from the National Institutes of Health, American Diabetes Association, American Heart Association, American Nurses Association, Joint Commission, AWHONN, and others. A companion Website includes full text, an image bank, and drug-related NCLEX®-style questions, FDA updates, and new clinical studies.

Clinically focused and evidence-based, Harwood-Nuss’ Clinical Practice of Emergency Medicine, Seventh Edition, is a comprehensive, easy-to-use reference for practitioners and residents in today’s Emergency Department (ED). Templated chapters rapidly guide you to up to date information on clinical presentation, differential diagnosis, evaluation, management, and disposition, including highlighted critical interventions and common pitfalls. This concise text covers the full range of conditions you’re likely to see in the ED, with unmatched readability for quick study and reference.

This volume covers the entire spectrum of acute burn treatment. Individual chapters deal with basic aspects of different burn mechanisms as well as the acute care of burn patients. Pre-hospital management, critical care and basic concepts of burn surgery related to the acute phase, as well as the use of skin and skin substitutes in early stages of therapy are addressed in this volume. Chapters on supportive therapies such as optimizing nutrition and fluid homeostasis, infection control and treatment, respiratory support and pain management complete the comprehensive approach to the patient in this early stage of treatment, while chapters on epidemiology, prevention and disaster management enable the reader to evaluate the given information in a broader context.

Dementia is associated with a sizeable public health burden that is growing rapidly as the population ages. In addition to cognitive impairments, individuals with dementia often come to clinical attention because of symptoms of a behavioral disturbance (e.g., irritability, agitation, aggression) or psychosis. The burden on caregivers is substantial and is increased when dementia is associated with behavioral and psychological symptoms, and particularly with agitation or aggression. Treatment of psychotic symptoms and agitation in individuals with dementia has often involved use of antipsychotic medications. In recent years, the risks associated with use of these agents in the older adult population have become apparent. There has been a growing need to develop guidelines for appropriate use of antipsychotic medications in dementia. The American Psychiatric Association Practice Guideline on the Use of Antipsychotics to Treat Agitation or Psychosis in Patients With Dementia seeks to fulfill this need to improve the care of patients with dementia who are exhibiting agitation or psychosis. The guideline focuses on the judicious use of antipsychotic medications when agitation or psychosis occurs in association with dementia. It is intended to apply to individuals with dementia in all settings of care as well as to care delivered by generalist and specialist clinicians. The guideline offers clear, concise, and actionable recommendation statements to help clinicians to incorporate recommendations into clinical practice, with the goal of improving quality of care. Each recommendation is given a rating that reflects the level of confidence that potential benefits of an intervention outweigh potential harms. Findings from an expert opinion survey have also been taken into consideration in making recommendations or suggestions. In addition to reviewing the available evidence on use of antipsychotics in treating agitation or psychosis in patients with dementia, the guideline provides guidance to clinicians on implementing these recommendations to enhance patient care.
