This is the first full-length monograph devoted to the study of the talk between physicians and patients in a medical interview. Methods are developed to describe, analyze and interpret the discourse. Additionally, a critique and review of previous research in this area is included. In the course of the work, a critique of more traditional methods, studies, and interpretations of medical interviews is presented.

In the last decades of the nineteenth century, two thousand women physicians formed a significant and lively scientific community in the United States. Many were active writers; they participated in the development of medical record-keeping and research, and they wrote self-help books, social and political essays, fiction, and poetry. Out of the Dead House rediscovers the contributions these women made to the developing practice of medicine and to a community of women in science. Susan Wells combines studies of medical genres, such as the patient history or the diagnostic conversation, with discussions of individual writers. The women she discusses include Ann Preston, the first woman dean of a medical college; Hannah Longshore, a successful practitioner who combined conventional and homeopathic medicine; Rebecca Crumpler, the first African American woman physician to publish a medical book; and Mary Putnam Jacobi, writer of more than 180 medical articles and several important books. Wells shows how these women learned to write, what they wrote, and how these texts were read. Out of the Dead House also documents the ways that women doctors influenced medical discourse during the formation of the modern profession. They invented forms and strategies for medical research and writing, including methods of using survey information, taking patient histories, and telling case histories. Out of the Dead House adds a critical episode to the developing story of women as producers and critics of culture, including scientific culture.

The focus of this volume is on medical discourse, a domain of language which deserves closer scrutiny by academics as well as practitioners, due to its increasing relevance and pervasiveness in modern society. Despite the wealth of publications dealing with specialized or academic discourse and its rhetoric, few of these are devoted specifically to medical discourse. This book seeks to redress the balance by bringing together a number of studies that bear witness to the widespread interest in medical texts shown by linguists and professional communities around the world. The volume is divided into two main parts: the first targets medical discourse in its spoken dimension, while the second contains various analyses of written texts. The theoretical perspectives and individual case studies presented here reflect the wide range of methodological approaches and theoretical issues that characterise current research in the field.

How can irregular political situations, which impact the lives of millions, become normalized? Specifically, within the context of the Israeli-Palestinian conflict, how can 50 years of Israeli control over the Occupied Territories become accepted within Israeli society as a normal, possibly even banal phenomenon? Conversely, how can such a situation be estranged from daily reality, denied any relation to who "we" are? This volume explores these questions through the lens of two central discourses that dominate the Israeli debate regarding the future of the Occupied Territories: 1) Occupation Normalization Discourse, which portrays Israeli control of the territories as a "normal" part of life; 2) Occupation Estrangement Discourse, which portrays this situation as distant from Israeli reality. In addressing these discourses, the authors develop a new methodological tool, Dialectic Discourse Analysis, which examines discourse as a process of perpetual positing and synthesis of oppositions through the discursive construction, differentiation and mediation of self and other. Through this approach, the authors illustrate that these discourses are dialectically constituted in opposition to one another, feeding off one another, each enabling the other to exist. This dynamic has resulted in a fixed discourse, preventing any progress towards a synthesis of oppositions.

For anyone approaching Discourse Analysis for the first time, theory means little when it is not related to actual knowledge and experience of language in use. Describing Discourse takes the unique approach of introducing discourse studies through the hands-on analysis of linguistic data. The book introduces students to specific discourses constructed for particular purposes, for example, from the domains of advertising, law, medicine and education. Each chapter provides examples, exercises and commentary designed to develop the analytical abilities needed in describing the characteristic forms and typical functions of different discourses. Describing Discourse provides the ideal entry into the study of discourse for students new to the subject.
