Common rail direct fuel injection is a direct fuel injection system built around a high-pressure (over 2,000 bar or 200 MPa or 29,000 psi) fuel rail feeding solenoid valves, as opposed to a low-pressure fuel pump feeding unit injectors (or pump nozzles). High-pressure injection delivers power and fuel consumption benefits over earlier lower pressure fuel injection, [citation needed] by ...

**Direct Injection:** Direct injection is common in diesel engines, although starting to be common on gasoline engine designs. It is sometimes called DIG for direct-injection gasoline. In its process, fuel is injected directly into the combustion chamber, past the valves. Fuel metering is more precise than other fuel injection types.
