Hidden lines are having depth explanation behind according to the drawing system. In the engineering drawing lines are understood only by draftsmen and manufactures as well as drawing experts. Hidden lines. Hidden lines are showing the surfaces of the drawing but the lines are not visible directly.

What is the useful of hidden lines in the engineering Drawing?

A drafter—in deciding whether a line in a view should be represented as hidden or as visible—relies on the fact that in third-angle projection the near side of the object

is near the adjacent view, but in first-angle projection the near side of the object is remote from the adjacent view. In Figure 4B (third-angle projection) the top of the front view is near the top view; the front of the top view is near the front view; and the front of the side view is near the front view.

3.13 Hidden Lines and Centerlines. Hidden lines in a drawing represent the edges where surfaces meet but are not directly visible. Hidden lines are omitted from pictorial drawings unless they are needed to make the drawing clear. Figure 3.46 shows a case in which hidden lines are needed because a projecting part cannot be clearly shown without them. Sometimes it is better to include an isometric view from another direction than to try to show hidden features with hidden lines.

What is the useful of hidden lines in the engineering Drawing? This means that BD crosses above AC, so that BD must be visible in the top view and AC hidden. Similarly, to study the visibility of these lines in the front view, the vertical construction line is drawn through Q, the crossing of A V C V and B V D V; this procedure indicates that the point on BD is nearer to the front of

Hidden Lines In Engineering Drawings

Hidden or broken lines are used to see what is hidden or behind a solid object, or if you are creating a pattern development, hidden lines are used to know what part is being folded. There are many types of lines used in engineering drawing and it varies on what type of pencil you are using, but the three main lines that are used are: Hidden lines, Construction lines and Solid lines.

Why do we use hidden lines in engineering drawing? - Quora

Hidden Lines (Thin) Hidden Lines (Thin) type lines consist of thin short dashes, closely and evenly spaced. These lines are drawn to represent hidden or invisible edges of the objects. Although THICK lines of Type-E are recommended for representing the hidden edges, THIN lines of Type-F are preferred. Type G. Centre lines, Lines of Symmetry, Trajectories, and Pitch Circles

10 Different Types of Lines Used In Engineering Drawing

The Dashed Line is used to indicate hidden details like hidden outlines and hidden edges. The dashed line may be either thick or thin, but only one type (thick or thin) should be used on a single drawing or set of drawings. Thin Chain Line. The Thin Chain Line is used to indicate center lines, the lines of symmetry and also trajectories.

Different line types used on Engineering Drawings ...

Hidden lines are used to show surfaces that are not directly visible. All surfaces must be shown in all views. If an edge or surface is blocked from view by another feature, it is drawn using a hidden line. Figures 4-11 and 4-12 show objects that require hidden lines in their orthographic views.

HIDDEN LINES Hidden edge lines are drawn with short dashes and are used to show hidden features of an object. A hidden line should begin with a dash in contact with the line from which it starts, except when it is the continuation of an unbroken line. (See fig. 3-26.)

CONSTRUCTION LINES - Engineering Training and Reference ...

An engineering drawing is a type of technical drawing that is used to convey information about an object. A common use is to specify the geometry necessary for the construction of a component and is called a detail drawing. Usually, a number of drawings are necessary to completely specify even a simple component.

It has cited an example of a mechanical engineering drawing where it is using a dashed line with 0.18mm thickness for a hidden line. On the other hand it says that for internal threads we should use hidden lines with 0.35mm thickness. And further it says that only one thickness of hidden should be used. This has got me totally confused.

Line weights & Thicknesses in Engineering Drawings ...

For most engineering drawings you will require two thickness', a thick and thin line. The general recommendations are that thick lines are twice as thick as thin lines. A thick continuous line is used for visible edges and outlines. A thin line is used for hatching, leader lines, short centre lines, dimensions and projections.
