P. A. Ritzer has sold thousands of copies of his first book, the award-winning historical Western Seven Ox Seven, Part One: Escondido Bound, at nearly 200 bookstore book signings (nearly 190 at Barnes & Noble stores alone). He has written Love and the Art of Bookstore Book Signing as an answer to authors, bookstore personnel, distributors, and others in the book business who have sought to know how he does it. Ritzer does not just detail a method but goes to the heart of the matter. He exposes the real basis of his success in interacting with customers and the people who help him sell books. In Love and the Art of Bookstore Book Signing, Ritzer shows that an author need not be a celebrity to make book signings rewarding for himself and the stores and their customers. Rather, he can create the kind of experience that inspires customers to buy his book and managers to invite him back for 20 or more successful signings of the same book at one store.

Despite their utilitarian nature, many bridges constitute the most visually stunning structures of our cities and towns. In Bridgescape: The Art of Designing Bridges, Frederick Gottemoeller brings the aesthetic aspects of bridge design within the grasp of all architects, engineers, and designers. This innovative approach challenges the reader to design and build bridges that are both functional and pleasing to the eye. Gottemoeller demystifies the creative process by breaking down the bridge into its most fundamental elements-line, form, and placement in the site, as well as color, texture, and ornamentation. The author shows how to plan bridges that take into account symbolism, historical meaning, and our ability to understand the visual world. But Bridgescape is more than an introduction to the aesthetic and engineering aspects of building a bridge. The author also discusses the dynamics of involving local authorities and the community in bridge design. From highway to pedestrian bridges, this book offers realistic and enlightening solutions for incorporating visually distinctive bridges within real-world situations and contexts. Working from the "skeleton" of the bridge-its girders, piers, and abutments-to its decorative features-color, carving, and texture-the author offers practical, easy-to-understand guidelines that can be applied to even the smallest of bridge design projects. Just a few key factors can profoundly enhance a bridge's appearance. Distinct from the technical books that separate architecture from engineering, Bridgescape offers a refreshing survey of the power of aesthetics in modern bridge design. A sixteen-page color insert enlivens the text, which is generously illustrated with over 280 photographs and drawings of bridges. Both engineers and architects will find Bridgescape an indispensable reference volume and an inspiring introduction to the aesthetic side of bridge engineering.

This book advocates a fresh approach to planning that anticipates, rather than reacts to, the changes in climate currently in process. Today's spatial planning procedures rely on historical evidence instead of preparing for factors that by definition lie in the future, yet which are relatively uncontroversial: shortages of water, sea level rise and rises in average temperatures being but three examples. Arguing for more flexibility, the contributors view 'complexity' as the key to transforming the way we plan in order to better equip us to face uncertainties about our future environment.

This educational project management book aims at providing project management knowledge and skills for the purpose of education. Project management requires science and art to coexist; science refers to the systematic and precise project management process. Science is combined with the artistic skill to deal with unpredictability and human behaviour. An educational project manager creates the plan, as no battle is ever won without one. However, in the current era of global crisis, shared visions and countries' policies relate to educating future citizens in managing confusion and complexity, even sudden change, in everyday life. Unpredictability is dealt with through creativity and flexibility. At the moment, a major gap in educational authorship exists in regard to educational project management; there is no book on the subject. In addition, many educational approaches become more and more obsolete; they are replaced by new ones due to rapid world changes and ubiquitous technology. Thus, new modes of thinking and learning are prerequisites to encompass such global perspectives and technological advances. This book discusses innovative ideas and solutions for designing, developing, evaluating and sustaining educational projects. It is within humanity's natural competence to learn, adapt and evolve when reaching the abilities' barriers and entering a new developmental spiral on a lifelong learning journey. Technology provides the medium to think, create and act in a more mindful and effective way for sustaining future life and wellbeing. Hence, this book offers an additional perspective and focus on existing knowledge for the next generation's learning spaces design and development, so that the learners can initially reach their levels of abilities, and furthermore, unlock their hidden potential. Such implication requires an interdisciplinary background to create the underpinned matrix for the next generation educational project management (EPM). EPM is anchored in solid theoretical pillars combined with the best practices, including the human immersive experience when using new technologies. This book is an everyday tool for educational practitioners towards excellence in teaching and learning without interfering with natural learning, removing barriers and creating unlimited possibilities for the evolution of the individual, group and community. As the tools aid in the externalization of our abilities, learning to adapt and be free to express is now considered situational and theme-based learning, utilizing all shades from the real to the virtual matrix. EPM provides additional educational solutions to trigger new and undiscovered human abilities to visualize, harness, realize and advance educational communities' common purposes. This book is part of the global solution in an era experiencing a world crisis, moving beyond known states and barriers by designing and developing progressive and cutting edge immersive educational experiences and projects for an inclusive world for all.
