Markov Decision Processes - MIT  
OpenCourseWare

Markov Decision Processes oAn MDP  
is defined by: oA set of states  $s \in S$  oA  
set of actions  $a \in A$  oA transition  
function  $T(s, a, s')$  oProbability that a  
from  $s$  leads to  $s'$ , i.e.,  $P(s' | s, a)$

# Access Free Markov Decision Processes In

oAlso called the model or the dynamics oA reward function  $R(s, a, s')$  oSometimes just  $R(s)$  or  $R(s')$  oA start state oMaybe a terminal state

## Markov Decision Processes

Markov Decision process (MDP) is a framework used to help to make

# Access Free Markov Decision Processes In Artificial Intelligence

decisions on a stochastic environment. Our goal is to find a policy, which is a map that gives us all optimal actions on each state on our environment. MDP is somehow more powerful than simple planning, because your policy will allow you to do optimal actions even if something

# Access Free Markov Decision Processes In

Artificial Intelligence— a  
Markov Decision Process (MDP) is a  
mathematical framework used for  
modeling decision-making problems  
where the outcomes are partly  
random and partly controllable.  
We ' ll discuss MDPs in greater detail  
as we walk through the article.

Artificial Intelligence: Markov

# Access Free Markov Decision Processes In

Artificial Intelligence Decision Process. In AI, sometimes, you need to plan a sequence of action that lead you to your goal. In stochastic environment, in those situation where you can ' t know the outcomes of your actions, a sequence of actions is not sufficient: you need a policy . Markov Decision Process is a

# Access Free Markov Decision Processes In

Artificial Intelligence  
mathematical framework that helps  
to build a policy in a stochastic  
environment where you know the  
probabilities of certain outcomes.
