The Datsun Truck is a compact pickup truck made by Nissan in Japan from 1955 through 1997. It was originally sold under the Datsun brand, but this was switched to Nissan in 1983. It was replaced in 1997 by the Frontier and Navara.In Japan, it was sold only in Nissan Bluebird Store locations.

**Datsun Truck** – Wikipedia

Nissan matched the D21 Hardbody trucks with a five-speed manual transmission or four-speed automatic. The 1994 model with the 2.4-liter and manual transmission earned 18 mpg in the city and 24 on the highway. The manual V-6 achieved 17 mpg in urban driving and 22 on the highway, compared to 16 and 22 mpg, respectively, for the automatic V-6.

**Nissan D21 Performance—It Still Runs**

The Nissan D21 / Nissan Pathfinder / Nissan Truck Repair Manual is the most competent source for all information on these crossover models manufactured from 1985 to 1994. These jeeps were completed with gasoline engines of 1.6, 2.0, 2.4, 3.0 liters, or diesel engines of 2.7 liters, another option – turbo diesel engines of 2.7 liters.

<p>This collaborative study between the NRC and the Chinese Academy of Engineering (CAE) addresses the problems facing China in the next twenty years as it attempts to provide personal transport desired by millions of Chinese, while preserving the environment and the livability of its cities. According to Song Jian, president of the CAE, the decision has already been taken to produce a moderate cost family car in China, which will greatly increase the number of vehicles on the roads. This study explores the issues confronting the country, including health issues, the challenge to urban areas, particularly the growing number of megacities, environmental protection, infrastructure requirements, and technological options for Chinese vehicles. It draws on the experience of the United States and other countries and review model approaches to urban transportation and land use planning. Recommendations and policy choices for China are described in detail.</p>

As soon as there were automobiles, there was racing. The first recorded race, an over road event from Paris to Rouen, France, was organized by the French newspaper Le Petit Journal in 1894. Seeing an opportunity for a similar event, Hermann H. Kohlsaat—publisher of the Chicago Times-Herald—sponsored what was hailed as the "Race of the Century," a 54-mile race from Chicago's Jackson Park to Evanston, Illinois, and back. Frank Duryea won in a time of 10 hours and 23 minutes, of which 7 hours and 53 minutes were actually spent on the road. Race cars and competition have progressed continuously since that time, and today's 200 mph races bear little resemblance to the event Duryea won. This work traces American auto racing through the 20th century, covering its significant milestones, developments and personalities. Subjects included are: Bill Elliott, dirt track racing, board track racing, Henry Ford, Grand Prix races, Dale Earnhardt, the Vanderbilt Cup, Bill France, Gordon Bennett, the Indianapolis Motor Speedway, the Mercer, the Stutz, Duesenberg, Frank Lockhart, drag racing, the Trans Am, Paul Newman, vintage racing, land speed records, Al Unser, Wilbur Shaw, the Corvette, the Cobra, Richard Petty, NASCAR, Can Am, Mickey Thompson, Roger Penske, Mario Andretti, Jeff Gordon, and Formula One. Through interviews with participants and track records, this text shows where, when and how racing changed. It describes the growth of each different form of auto racing as well as the people and technologies that made it ever faster.

<p>John Dean is a Virginian with a special gift as a career warrior and a heroic example to follow that leads him through the nightmare of the Normandy invasion and Korea. After retiring from the army, he settles down, marries a hometown sweetheart, and becomes a stone mason. Stress response syndrome, as they called it in those days, causes him to fail miserably as a father and a husband. Suddenly, John is an old man, widowed and alone in a retirement community that he cant adjust to. His only son, John, Jr., who has his own hell to deal with spawned from the jungles of Vietnam, disappears into the Alaskan wilderness. Johns grandson, Davy, comes to visit him. Dismayed at his grandfathers decline, he impulsively throws out a challenge to the old man that sets off a remarkable chain of events, taking the two from a mountaintop reunion and a hunting trip onward to a county jail cell, a small Finnish town, and then to Alaska in search of John, Jr. Through his grandsons love and his own unpredictable will, John Dean seeks to rebuild his life and find the salvation of Gods grace. Follow this pair of Virginians on a triumphant journey of heart and soul.</p>

<p>Technologies and Approaches to Reducing the Fuel Consumption of Medium- and Heavy-Duty Vehicles evaluates various technologies and methods that could improve the fuel economy of medium- and heavy-duty vehicles, such as tractor-trailers, transit buses, and work trucks. The book also recommends approaches that federal agencies could use to regulate these vehicles' fuel consumption. Currently there are no fuel consumption standards for such vehicles, which account for about 26 percent of the transportation fuel used in the U.S. The miles-per-gallon measure used to regulate the fuel economy of passenger cars. is not appropriate for medium- and heavy-duty vehicles, which are designed above all to carry loads efficiently. Instead, any regulation of medium- and heavy-duty vehicles should use a metric that reflects the efficiency with which a vehicle moves goods or passengers, such as gallons per ton-mile, a unit that reflects the amount of fuel a vehicle would use to carry a ton of goods one mile. This is called load-specific fuel consumption (LSFC). The book estimates the improvements that various technologies could achieve over the next decade in seven vehicle types. For example, using advanced diesel engines in tractor-trailers could lower their fuel consumption by up to 20 percent by 2020, and improved aerodynamics could yield an 11 percent reduction. Hybrid powertrains could lower the fuel consumption of vehicles that stop frequently, such as garbage trucks and transit buses, by as much 35 percent in the same time frame.</p>
