The Art & Science of Shepherding is a long read but the if you are someone who personally values being part of the “ emotional bond ” and “ finite world ” of agriculture then this book will be of interest to you.

This in-depth, multi-authored work originally published in France takes readers deep into traditional world of shepherds. Far from a nostalgic glimpse into a romanticized lifestyle, this book teaches how this sophisticated art and set of tangible skills has application in modern, North American range/livestock management. Through academic study and analysis and in-depth interviews with master shepherds readers will be amazed by the deep connection between the nutritional need for animals to feed, the powers of observation used by the shepherds to effectively care for and manage large herds, and how the traditional moving of the animals is more fitting to many landscapes than even the most progressive rotational grazing and moveable fencing systems. The compilation carries enough weight to dazzle the most ardent student and enough real-world know-how to equip the 21st-century herdsman with new insights and philosophies.

"The Sheep Book offers a template for both the beginner and the old hand. Mixing theoretical, technical and practical, Parker offers a buffet of tips for any sheep producer." --Joel Salatin, author of You Can Farm

Two Percent Solutions for the Planet profiles fifty innovative practices that soak up carbon dioxide in soils, reduce energy use, sustainably intensify food production, and increase water quality. The “ two percent ” refers to: the amount of new carbon in the soil needed to reap a wide variety of ecological and economic benefits; the percentage of the nation ’ s population who are farmers and ranchers; and the low financial cost (in terms of GDP) needed to get this work done. As White explained in Grass, Soil, Hope, a highly efficient carbon cycle captures, stores, releases, and recaptures biochemical energy, mitigating climate change, increasing water storage capacities in soil, and making green plants grow. Best of all, we don ’ t have to invent anything new—a wide variety of innovative ideas and methods that put carbon back into the soil have been field-tested and proven to be practical and profitable. They ’ re mostly low-tech, too, relying on natural resources such as sunlight, green plants, animals, compost, beavers, creeks, and more. In Two Percent Solutions for the Planet, White expands what he calls the “ regenerative toolbox, ” to include holistic grazing, edible forests, biochar, weed-eating livestock, food co-ops, keyline plowing, restoration agriculture, bioenergy, aquaponics, animal power, Farm Hack, bees, bears, wildlife corridors, rainwater harvesting, native seeds, and various other projects from across the United States, as well as in Canada, Europe, and Australia. These short, engaging success stories will help readers connect the dots between diverse, exciting, and pragmatic practices, and inspire them to dig deeper into each individual story and concept, energized by the news that solutions do exist.

With stories about species on the brink, this book explores the causes and consequences of conservation reliance and its implications.

Reflections on feeding body and spirit in a world of change Animal scientists have long considered domestic livestock to be too dumb to know how to eat right, but the lifetime research of animal behaviorist Fred Provenza and his colleagues has debunked this myth. Their

work shows that when given a choice of natural foods, livestock have an astoundingly refined palate, nibbling through the day on as many as fifty kinds of grasses, forbs, and shrubs to meet their nutritional needs with remarkable precision. In *Nourishment* Provenza presents his thesis of the wisdom body, a wisdom that links flavor-feedback relationships at a cellular level with biochemically rich foods to meet the body's nutritional and medicinal needs. Provenza explores the fascinating complexity of these relationships as he raises and answers thought-provoking questions about what we can learn from animals about nutritional wisdom. What kinds of memories form the basis for how herbivores, and humans, recognize foods? Can a body develop nutritional and medicinal memories in utero and early in life? Do humans still possess the wisdom to select nourishing diets? Or, has that ability been hijacked by nutritional "authorities"? Consumers eager for a "quick fix" have empowered the multibillion-dollar-a-year supplement industry, but is taking supplements and enriching and fortifying foods helping us, or is it hurting us? On a broader scale Provenza explores the relationships among facets of complex, poorly understood, ever-changing ecological, social, and economic systems in light of an unpredictable future. To what degree do we lose contact with life-sustaining energies when the foods we eat come from anywhere but where we live? To what degree do we lose the mythological relationship that links us physically and spiritually with Mother Earth who nurtures our lives? Provenza's paradigm-changing exploration of these questions has implications that could vastly improve our health through a simple change in the way we view our relationships with the plants and animals we eat. Our health could be improved by eating biochemically rich foods and by creating cultures that know how to combine foods into meals that nourish and satiate. Provenza contends the voices of "authority" disconnect most people from a personal search to discover the inner wisdom that can nourish body and spirit. That journey means embracing wonder and uncertainty and avoiding illusions of stability and control as we dine on a planet in a universe bent on consuming itself.

Improving the dynamic relationship between nature and human well-being is a pressing issue of our time. Landscapes embody this tight interconnectedness and serve as unique sustainability learning hubs, showcased by the global rise of place-based and holistic landscape stewardship initiatives. Incorporating these exciting developments, this book explores the principles of landscape stewardship and their function in fields such as agriculture, ecological restoration and urban green infrastructure. It provides insights into the challenges and the potential of landscape stewardship and identifies future paths for the science and practice of landscape-related sustainability efforts. Aligning analytical perspectives with practical applications, it brings together contributions from leading scholars and innovative models of landscape stewardship from all around the world, making it an essential resource for anyone interested in developing sustainable human-nature relationships.

Ott provides an excellent ethnography of a French Basque agrarian and shepherding community. The commune of Sainte-Engrâce extends along a mountain valley in the southeastern corner of Soule, one of the three Basque provinces in France. In *The Circle of Mountains*, Sandra Ott examines the importance of cooperation and reciprocity as the essential basis for the main institutions within this community. These French Basques visualize their community as a circle, and their vision of living in "the circle of mountains," rather than in a valley, reflects their perspective on the society in which they live. The first half of the book incorporates material on history, ecology and economy, and delves deeply into the domestic organization, kinship, and neighborliness of this Basque community. In the second half of the book, the author introduces the males' customary roles as shepherds and cheesemakers. Following a detailed commentary on these vocations, Ott suggests that these seemingly prosaic activities represent the male attempt at symbolic fulfillment of the female procreative and nurturing roles. In a new afterword, Ott discusses developments that have impacted life in the pastoral community of Sainte-Engrâce since the original publication of the book—including the acquisition of telephones and the construction of roads to nearly every home. *The Circle of Mountains* will be of interest not only to social anthropologists but also to those concerned with the Basque language and culture and to scholars and students of ethnology, international studies, and political science.

Living on a damaged planet challenges who we are and where we live. This timely anthology calls on twenty eminent humanists and scientists to revitalize curiosity, observation, and transdisciplinary conversation about life on earth. As human-induced environmental change threatens multispecies livability, *Arts of Living on a Damaged Planet* puts forward a bold proposal: entangled histories, situated narratives, and thick descriptions offer urgent "arts of living." Included are essays by scholars in anthropology, ecology, science studies, art, literature, and bioinformatics who posit critical and creative tools for collaborative survival in a more-than-human Anthropocene. The essays are organized around two key figures that also serve as the publication's two openings: Ghosts, or landscapes haunted by the violences of modernity; and Monsters, or interspecies and intraspecies sociality. Ghosts and Monsters are tentacular, windy, and arboreal arts that invite readers to encounter ants, lichen, rocks, electrons, flying foxes, salmon, chestnut trees, mud volcanoes, border zones, graves, radioactive waste—in short, the wonders and terrors of an unintended epoch. Charismatic David Kennard lives a life most people can only dream about. Farming on a spectacularly beautiful part of the Devon coast he has an almost telepathic bond with nature and with his working sheepdogs. His is a life filled with daily challenges, from the battles with wild Atlantic weather to the dramas of cliff-top rescue, but it is also a life full of the richness of rebirth, and the Herriot-esque delight in a way of life that has remained almost untouched by the modern world. Part diary, part homage to the countryside and the canine family that is so much a part of his life, David Kennard's extraordinary book is designed to touch the hearts and minds of city and country dwellers alike.
