(a) Every vector space contains a zero vector. (b) A vector space may have more than one zero vector. (c) In any vector space, $au = bu$ implies $a = b$. (d) In any vector space, $au = av$ implies $u = v$.

1.3 Subspaces

It is possible for one vector space to be contained within a larger vector space.

Vector space: definition Vector space is a set V equipped with two operations $+$: $V \times V \rightarrow V$ and μ : $\mathbb{R} \times V \rightarrow V$ that have certain properties (listed below).
