Diesel engine is acknowledged for its superior efficiency and possesses a wide field of applications. It is also known as CI engine. Diesel engines also however, are the prime source of emissions such as NOX and particulate matter (PM). In order to reduce the emissions to an absolute minimum, this book explain as to how these toxins can be regulated. It is no hidden secret that the world is witnessing an oil crisis. But with other alternative sources such as biogas, natural gas and coke based substances; diesel is not the only way forward. The unique characteristics and properties such as combustion and emission of the aforementioned alternatives are explained extensively in this book. The book also goes on to explain how one

Global warming. Renewable energy. Hazardous waste. Air Pollution. These and other environmental topics are being discussed and debated more vigorously than ever. Colin Baird and Michael Cann's *Environmental Chemistry* is the only textbook that explores the chemical processes and properties underlying these crucial issues at an accessible, introductory level. With authoritative coverage that balances soil, water, and air chemistry, the new edition again focuses on the environmental impacts of chemical production and experimentation, offering additional "green chemistry" sections and new case studies, plus updated coverage of energy production (especially biofuels), the generation and disposal of CO₂, and innovative ways to combat climate change.

This publication gives a wide-ranging perspective on the present state of mechanization in the developing world, and, as such, constitutes a solid platform on which to build strategies for a sustainable future. Farm mechanization forms an integral plank in the implementation of sustainable crop production intensification methodologies and sustainable intensification necessarily means that the protection of natural resources and the production of ecosystem services go hand-in-hand with intensified production practices. This requires specific mechanization measures to allow crops to be established with minimum soil disturbance, to

allow the soil to be protected under organic cover for as long as possible, and to establish crop rotations and associations to feed the soil and to exploit crop nutrients from various soil horizons. This work is the starting point to help the reader understand the complexities and requirements of the task ahead.

Volume II of The Official History of the UK Strategic Nuclear Deterrent provides an authoritative and in-depth examination of the British government's strategic nuclear policy from 1964 to 1970. Written with full access to the UK documentary record, Volume II examines the controversies that developed over nuclear policy following the arrival in office of a Labour government led by Harold Wilson in October 1964 that openly questioned the independence of the deterrent. Having decided to preserve the Polaris programme, Labour ministers were nevertheless committed not to develop another generation of nuclear weapons beyond those in the pipeline, placing major doubts over the long-term future of the nuclear programme and collaboration with the United States. Defence planners also became increasingly concerned that the deployment of Soviet anti-ballistic missile (ABM) defences around Moscow threatened to undermine the ability of Polaris to fulfil its role as a national strategic nuclear deterrent.

During 1967, under heavy pressures to control defence spending, a protracted debate was conducted within Whitehall over the future of Polaris and how to respond to the evolving ABM challenge. The volume concludes with Labour's defeat at the general election of June 1970, by which time the Royal Navy had assumed the nuclear deterrent role from the RAF, and plans had already been formulated for a UK project to improve Polaris which could both ensure its continuing credibility and rejuvenate the Anglo-American nuclear relationship. This book will be of much interest to students of British politics, Cold War history, nuclear proliferation and international relations.

Evangeline Teale has been living a quiet, low key life but then her lover from her thousand lifetimes returns once more to try for a happily ever after, now that she's removed her cruel father from her life-permanently. Ardis finds his status as a vampire distasteful and longs to be a living being again. He persuades Evangeline to kill her wicked witch mother before she decides to kill her. He also wants her help locating an ancient grimoire that may contain a spell that will change him back to a living human being again, only the last known place the spellbook was was in the hands of the powerful vampire who changed Ardis centuries ago. There is much at stake as they struggle to not lose one another again in this lifetime. Will they succeed in finding their happily ever after at long last?

In The Dictionary of Non-Philosophy, the French thinker François Laruelle does something unprecedented for philosophers: he provides an enormous dictionary with a theoretical introduction, carefully crafting his thoughts to explain the numerous terms and neologisms that

he deems necessary for the project of non-philosophy. With a collective of thinkers also interested in the project, Laruelle has taken up the difficult task of creating an essential guide for entering into his non-standard, non-philosophical terrain. And for Laruelle, even the idea of a dictionary and what a dictionary is become material for his non-philosophical inquiries. As his opening note begins, “Thus on the surface and within the philosophical folds of the dictionary, identity and its effect upon meaning are what is at stake.”
